

AIREX® PXc

Fiber-Reinforced Structural Foam

DATA SHEET 07.2011 - Replaces 08.2010

DESCRIPTION

AIREX® PXc is a closed-cell, fiber reinforced polymer foam with very high mechanical properties ideally suited as core material for structurally loaded sandwich applications.

The sophisticated manufacturing process evenly distributes continuous glass fibers throughout the foam generating a very consistent foam with enhanced mechanical properties especially in compression and shear.

AIREX® PXc is dimensionally stable, has very low water absorption, and is resistant to chemicals and high temperatures. It is ideally suited as a core material for highly loaded sandwich structures or as a replacement for wood and plywood.

CHARACTERISTICS						
 High shear and compression properties Replacement for wood and plywood Good fastener pull-out strength High heat resistance Compatible with a wide range of resins and adhesives Dimensionally stable High styrene resistance Very low water absorption Non biodegradable Excellent chemical resistance 						
APPLICATIONS						
 Marine: Transoms, bulkheads, stringers, engine beds, floors, interiors, local reinforcements, tooling and molds Road and Rail: Floors, sidewalls, roofs, engine covers, interior panels Industrial: Covers, tanks, containers, tooling and molds, local reinforcements, architectural panels, sporting goods 						
PROCESSING						
 □ Contact molding (hand/spray) □ Resin infusion / injection (VARTM / RTM) □ Adhesive bonding □ Pre-preg processing □ Processing molding (GMT, SMC)

Finishing Options, other dimensions and closer tolerances upon request

The data provided gives approximate values for the nominal density. Due to density variations these values can be lower than indicated above. Minimum values to calculate sandwich constructions can be provided upon request.
